

Subject: abstract for Carnegie talk

Date: Wed, 9 Oct 2002 17:00:37 -0700 (PDT)

From: Mark Lacy <mlacy@ipac.caltech.edu>

To: Andrea Dean <andrea@ipac.caltech.edu>

Hi andrea,

I just remembered I forgot to give you the abstract for my talk at Carnegie on the 24th Oct to clear through JPL:

Massive black holes and their hosts at high redshift

Powerful AGN provide excellent tracers of massive black holes at high redshifts, and can tell us about the formation of the most massive galaxies seen today. In this talk I discuss the constraints that current observations of radio-loud and radio-quiet AGN can place on the number densities of high- z massive black holes and how they compare to the predictions of cosmological theories.
